

ACI Software Drives World Class IBM SmartBank Showcase

(Omaha, Neb. – 15 February 2007)– ACI Worldwide (NASDAQ: TSAI), a leading international provider of software for electronic payment systems, today announced that the company's BASE24-eps™ payments solution is helping to drive the IBM SmartBank Showcase running at the IBM Executive Briefing Center in Montpellier, France, and Poughkeepsie, New York. BASE24-eps (formerly BASE24-es®) serves as the core payments application of the SmartBank architecture, providing end-to-end transaction processing. The virtual showcase simulates a live banking payments operating environment and demonstrates the scalability, security and flexibility of BASE24-eps on the IBM System z® platform.

"The SmartBank operating environment represents a real life operating environment with workloads generated by banking applications, making the showcase a mirror image of a bank's day-to-day operation and challenges," said Morten Nygaard, program director, IBM System z sales and marketing. "The combination of ACI's BASE24-eps payments solution and IBM System z servers provides the scale, performance, flexibility and security necessary to address the high volumes and performance peaks inherent in a typical retail payments operation."

As the architecture's core payments application, BASE24-eps will process various transaction types acquired through a Visa interface or directly from a host system via Web services and will provide the necessary authentication and authorization support to complete the transactions. The SmartBank showcase will demonstrate how current and future business challenges facing the retail banking industry such as operational risk, security and privacy, and core banking transformation including retail payments are being effectively managed by the IBM System z-based IT infrastructure.

"ACI is committed to delivering industry-leading solutions and we are excited about the possibilities the showcase presents," said Mark Vipond, chief operating officer at ACI Worldwide. "The SmartBank operation provides an excellent opportunity for our customers to experience the benefits of BASE24-eps running on IBM System z at an unprecedented level of sophistication."
