

ACI Worldwide and MShift to Present Prototype of Mobile Business Banking for Tablets at FinovateFall 2011

Innovative Solution Brings Full Business Banking to Tablet Devices

(New York, N.Y. – September 1, 2011) –ACI Worldwide (Nasdaq: ACIW), a leading international provider of payment systems, and MShift will be presenting a prototype of ACI Mobile Enterprise Banker™ as a tablet application at FinovateFall 2011 in New York, 19-20 September 2011 – for the first time showing how banks can provide complete business banking account access and management from iPads and other tablet devices.

MShift and ACI Worldwide formed an alliance in 2010 to offer mobile delivery of ACI Enterprise Banker, a leading business banking solution in the U.S. The two companies are working together to create the ground-breaking ACI Mobile Enterprise Banker for Tablet - a tablet-optimized business banking solution. The solution is designed for business executives who want robust and graphically-rich presentations of company data as well operational tasks like ACH and wire release, and bill payment - and who need access to conduct these types of transactions from anywhere at any time.

Susan Feinberg, Senior Research Director at TowerGroup said, “Banks have been enabling consumers to access their accounts through mobile devices for some time now, but business banking is, by its very nature, much more complex and therefore it has lagged behind retail banking. A tablet solution, such as the one being demonstrated by ACI Worldwide and MShift, is designed to meet the needs of executives in an era of business banking on the move.”

Ileen Pinhasi, Product Manager at ACI, and Jeff Chen, Vice President of Business Development at MShift will be jointly presenting the prototype for the application at FinovateFall.

MShift has been providing mobile banking solutions for over ten years and has more than 200 North American deployments. Leading financial institutions in the U.S. use Enterprise Banker as their main channel to deliver configurable online or mobile banking services to a broad range of customers, from the largest corporations down to individual consumers.
